

Mathematical Modeling

Proposal Requirements

Purpose

Gain alignment with the Business Customer on the solution/results that you plan to deliver.

Project Topics

Groups may choose from UMAP modules or ILAP projects (supplements to the text) or suggest a substantial mathematical modeling project of their own interest.

The Deliverables for the Proposal

The Team

Who is on your team and what are their roles? See Group Roles document.

The High-Level Project Plan

Major milestones – first draft of presentation, QA activities (testing, possible source of error), proposed class presentation date, school/class events – coordinate around those. Etc.

Written Documentation

Will the group deliver proofs, solved problems, data, graphs, etc.?

Will the Group Use Computational/Technology Tools

How will the computational tools be used? Number crunching, graphs, programs, ...

Presentation

What does the group intend on presenting to the Class?

Life Happens!

For reasons beyond our control, life impinges on our universe and things don't always go as planned. If there needs to be a significant change in your plan, deliverables, etc. make sure you let the Business Customer know. Review the changes and negotiate new deliverables if needed. Bad news does not improve with time, so communicate ASAP!

What's Next?

Upload

Upload your documentation as a .pdf into Canvas

Meeting with the Business Customer

Schedule meeting with the Business Customer to review your Proposal and get sign-off for the work.

Get busy!

Don't Forget!

Concurrently with turning in Part 1 group submission, all students must individually complete and submit a Peer Evaluation Form. **If a student fails to submit the required Peer Evaluation Form, then they will receive a 0 for their Part 1 grade. The Peer Evaluation must be serious and meaningful and not just pro forma. Feedback is a gift!**
