

Mathematical Modeling

Results Requirements

You will upload your work for this assignment as an online submission.

Deliverables – What You Submit

Each group is accountable for fulfilling their specific proposed deliverables. If some promised deliverable is missed, then there must be a written explanation why it is not being delivered.

The High-Level Project Plan

Major milestones completion – Turn in your completed project plan. It should have your proposed completion dates as well as the actual dates. Be ready to discuss any major deviations from the plan.

Written Documentation

The results that you proposed to deliver: proofs, solved problems, data, graphs, etc.

Computational/Technology Tools

Any results you generated using technology/tools. Source code for any programs that you committed to deliver.

Presentation

Draft of a PowerPoint that you intend to present to the class.

Quality Assurance Signoff

Test Results – Document verifying that all the results are correct and other deliverables (e.g. presentation, programs, ...) are error free.

Error analysis – If the Team finds an error in their results, the error should be documented. Groups will lose less credit if they find their own mistakes. Groups will lose no credit if they correctly explain how to fix their errors. (Real-life!)

Don't forget:

You must coordinate with the instructor to schedule a time to present your results to the class. You are strongly encouraged to schedule time with the Instructor to review your results and in particular your presentation before presenting it to the class.

Project reflection:

Each student must submit an Individual Reflection write-up.
